SOME NEW TYPES OF FUNCTIONS VIA TOPOLOGICAL OPERATORS

C. CARPINTERO\textsuperscript{1}, N. RAJESH\textsuperscript{2} AND E. ROSAS\textsuperscript{3}

Abstract. The purpose of this paper is to give two new type of functions called, quasi $(\gamma, \gamma')$-semiopen functions and quasi $(\gamma, \gamma')$-semiclosed functions. Also, we obtain their characterizations and basic properties.
