

CONTENTS

1. Brahim Moussa, Ismael Nyanquini and Stanislas Ouaro – Nonlinear discrete Neumann problem involving $p(k)$ -Laplacian type operator	5
2. Dramane Ouedraogo, Lassina Ouattara, Oumar Diop, Aboudramane Guiro - Mathematical model of malaria taking into account children under five years old	31
3. Edja Kouame Beranger, N'Guessan Yao Mathieu, N'Guessan Koffi and Toure Kidjegbo Augustin – Numerical non-simultaneous blow-up for a reaction-diffusion system with three components	53
4. Takashi Noiri and Valeriu Popa – On (i, j) - m - I -Continuous Multifunctions in Ideal Bitopological Spaces	81
5. Sadulla Z. Jafarov – Approximation properties of the derivatives of De La Vallee-Poussin means in weighted Lorentz spaces	91
6. Mine Uysal and Engin Azkan – On Bicomplex (k, l) -Gadovan Numbers	101
7. Kunle Oladeji Babalola and Abass Abiodun Adesokan – The Hankel Determinant $H_3(2)$ for Some Special Bounded Turning Functions	113
8. George A. Anastassiou and Dimitra Kouloumpou – Fractional Voronovskaya Asymptotic Expansions by Quasi-Interpolation Neural Network Operators applied to Brownian Motion	121
9. Abdullah Ozan Aslan, Hande Uyan, Seda Karateke, Ibrahim Buyukyazici – Statistical Properties of the Three - Parameter Logistic - Type Function and their Application to a Real - Life Dataset	137
